

Petition to US Environmental Protection Agency to Protect the Mad River Aquifer

Protection of the sole source aquifer that provides 82,000 Clark County residents with safe, pure water is the shared responsibility of our government officials and agencies. We, the undersigned, ask the US Environmental Protection Agency officials in Washington to review the current clean-up plan and resolve incomplete considerations concerning the clean-up at the Tremont Barrel Fill—a Superfund Alternative Site--located in German Township, Clark County, OH, *the purpose being to ensure safe pure water now and for generations to come.*
